Interactive Session: How to facilitate self-directed learning of students through STEAM education? (Secondary school)

Moderators: Eddy LEE, Rachel KO – The University of Hong Kong;

Cheung Chi Pan, Chan Kam Lung

– **Caritas Yuen Long Chan Chun Ha Secondary School;**

Tse Hoi Ming, Hui Yik On, *Chan Sing Hin Eyton**, *Wong Cheuk Nam Marcus**

– **St. Margaret's Co-educational English Secondary and Primary School**

Room 104, 2/F, Runme Shaw Building

03 May 2025

Abstract

Two local secondary schools - **Caritas Yuen Long Chan Chun Ha Secondary School**; **St. Margaret's Co-educational English Secondary and Primary School** - will share their experiences in developing self-directed learning (SDL) for students through STEAM education. They will present their SDL-STEAM curriculum units and discuss with the audience any questions they have regarding the implementation and outcomes of the learning designs.

兩所本地中學，**聖瑪加利男女英文中小學**、**明愛元朗陳震夏中學** 將分享他們透過 STEAM 教育培養學生自主學習 (SDL) 的經驗。他們將展示他們的 **SDL-STEAM** 課程單元和學習設，與予會者討論有關學習設計的實施和成果。

Q @cys

HOW TO FACILITATE

Self-Directed Learning
of Students through
STEAM education?
(Secondary school)

如何透過中學的STEAM
教育促進自主學習？

START PRESENTATION

大綱

甚麼是自主學習?

甚麼是STEAM教育?

學校、教師及學生背景資料

教學設計 - 智能家居專題

實踐經驗分享與學生成果

教師反思

總結與問答環節

甚麼是自主學習

Self-directed learning?

傳統課室由教師設定目標

逐漸推動

我需要製作一個智能風扇來解決問題。

自主學習包括五個學習元素(賽馬會 STEM 自主學習計劃, 2019):

自主學習的元素	描述
設定目標	<ul style="list-style-type: none">學生辨析個人學習目標及學習活動
自我規劃	<ul style="list-style-type: none">學生仔細地制訂和計劃與學習相關的決定和安排，例如計劃、製作學習時間表等
自我監控	<ul style="list-style-type: none">學生管理自己的學習時間學生監管一系列的學習策略學生在學習過程中調整自己的學習路徑
自我評價	<ul style="list-style-type: none">學生關注評估準則學生能按評估準則小心地評估課業
自我修訂	<ul style="list-style-type: none">學生根據教師或同儕在不同階段的回饋改進他們的課業學生能反思他們的學習並能應用他們所學的在新的環境

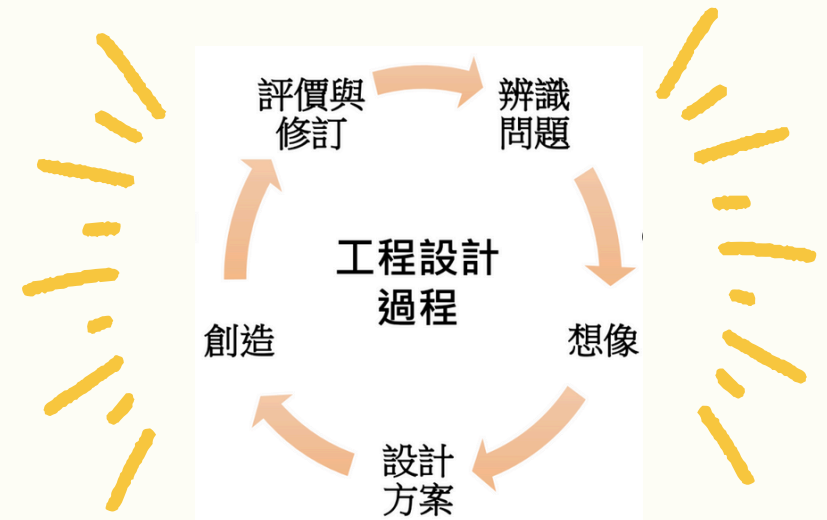

甚麼是STEAM教育？

「香港STEAM教育：中小學教師培訓」政策研究報告：

- “學校要以跨學科方式，把STEM教育的核心元素融入在課堂內外的**跨學科「動手」、「動腦」學習活動**，讓學生明白理科知識與日常生活息息相關，知識與應用不可割裂，以此培養學生的解難能力、協作能力和創意。”
- 校本課程，模式二「**專題為本**」實踐
- 加入ART藝術元素，推動學生創意發展

Interdisciplinary STEM, STEM Integration, Integrated STEM, Integrative STEM 的「跨學科STEM」四個重點：

- 解決**生活問題**，發展學生STEM素養和21世紀技能，引起學生好奇心，培養創意、協作能力和訓練批判性思考；
- 以**主題作連結**，運用STEM涉及的四門學科知識；
- 最少**綜合兩門學科知識**（即跨學科兩門或以上），不屬於STEM範疇的學科也可以；
- 教學法普遍提及主動學習，以學生為中心的教學法，如**問題或專題為本的學習法**、設計為本的學習法、探究式學習等。

背景資料

學校

- 明愛元朗陳震夏中學
- 獨立成科，創意科技科
- 設有STEAM ROOM
- 設備及工具齊全，例如，多台3D Printer及大型Laser Cutter

教師

- 兩名具資訊科技教育背景的教師
- 一名具設計與科技背景的助教
(工程E、科技T為主)

學生

- 計劃對象為中一級學生
- 3L學生較多(the last, the least, the lost)
- 普遍語文能力較弱
- 抽象/概念化思維較弱
- 動手做的能力及動機較高
- 對於正規學習較為被動
(成績相對較佳的一半同學參與是次計劃)

校本STEAM教育

透過創意科技科的學習達至 STEAM for ALL

創意

解難

協作

先導

中一級 - 智能家居
(教師提出情景問題)

中二級 - 智能農耕/交通
(教師提出情景問題)

中三級 - 智能??
(學生自主提出生活情景問題)

學生經歷

中一級創意科技科

*已有知識(電子、資訊科技及編程).

CH1單元 A Micro:bit 簡介

CH1單元 B Micro:bit 與輸入裝置(內置及外置感應器)

CH1單元C Micro:bit與輸出裝置(揚聲器、馬達及伺服馬達)

CH1單元D Micro:bit訊號互換溝通

應用於

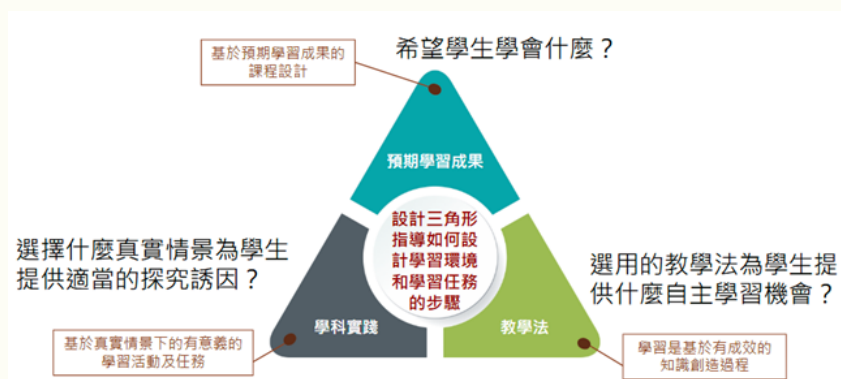

生活家居解難任務

micro:bit 		
內置 5 X 5 LED		
內置 麥克風		
內置 蜂鳴器		
內置 溫度感應器		
內置 光感應器		
外接 超聲波感應器		

教學設計三角框架 - 智能家居專題概要

預期學習成果

學生能夠利用課堂所學知識，協助以科技解決生活上不用的困難，從而學習到如何釐清問題，提升解難能力。學生能夠展現以下特質：

- 分析生活情況問題的成因
- 就生活家居的情景問題提出不同可行的解決方法
- 應用科技知識，設計一個智能家居產品原型來解決一個家居問題
 - 設定目標
 - 根據評分準則來不斷修訂自己的原型作品

真實情景

日常生活的家居問題，包括但不限於：

家中太陽西斜導致氣溫上升；難以打開垃圾桶；家中燈光不足導致失足...

教學法

- 小組形式專題研習(自主學習)
- 工程設計循環
- Think-Pair-Share／小組討論
- 動手做

實踐經驗分享 1： 「四格漫畫」切入生活問題 引起學習動機及設定目標

情景A

情景B

情景C

情境D 你的生活情景 (獎勵分)

試從你日常生活當中，找出一個影響你生活素質的家居問題。

文字描述:

教師評分/評語

--	--

實踐經驗分享 1： 「四格漫畫」切入生活問題 引起學習動機及設定目標

第一階段：問題分析

請細閱以下漫畫情境，分析漫畫中角色所遇到的問題。

情境 A

當小明在一烈日當空的中午回到家
中，發覺家中溫度也十分高，細察
之下才發現窗簾未有關上，以致陽
光直接照射入屋使氣溫上升，小明
感到十分困擾。

教師評分/評語

誰遇到問題? Who?	•	
何時? When?	•	
甚麼問題? What?	•	(如適用)
為什麼問題 會發生? Why?	• • •	• • • (如適用)

光直接照射入屋使氣溫上升，小明感到十分困擾。		教師評分/評語 <i>good!</i>			
誰遇到問題? Who?	•	小明	✓		
何時? When?	•	中午	✓		
甚麼問題? What?	•	發現家中溫度升高，窗簾未上 對小明有甚麼負面影響? (如適用)			
為什麼問題 會發生? Why?	•	窗簾未关上	✓	•	
	•	陽光直接照射入屋	✓	•	
	•	氣溫上升	✓	•	(如適用)

技巧：利用wh問題，讓同學自行預習及初步了解及分析各個情景的問題

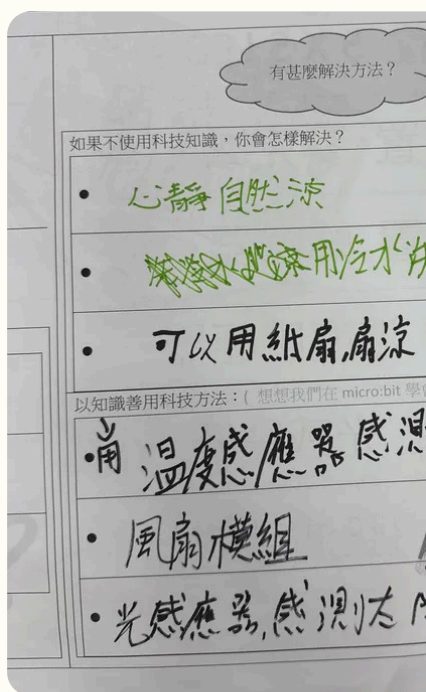

實踐經驗分享 2： 利用Padlet 腦力激盪 紀錄解難過程及強化朋輩學習

實踐經驗分享 2：

利用Padlet 腦力激盪 紀錄解難過程及強化朋輩學習

情景A的問題分析示例

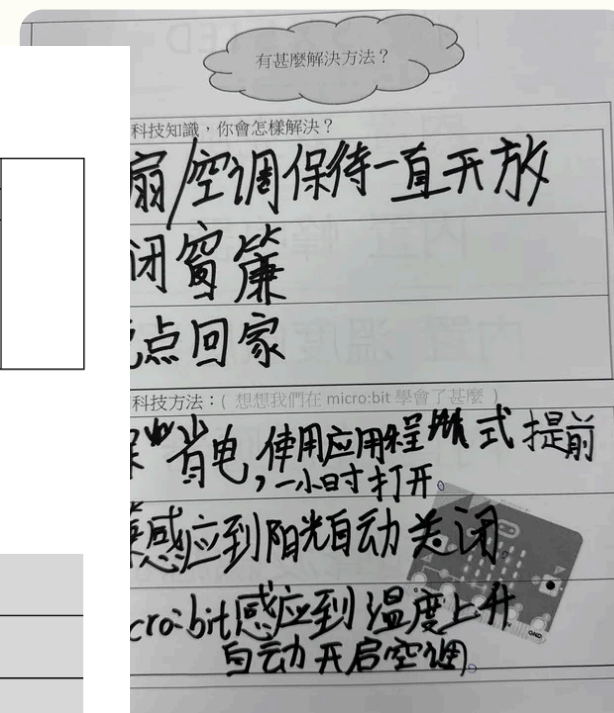

專題課業

評估細項 1：釐定問題 (30%)			
優異 (25 - 30)	良好 (20 - 25)	尚算滿意 (10 - 19)	有待改善 (0 - 10)
<ul style="list-style-type: none">能釐清所遇到的問題能清晰指出所選情景多個存在的問題	<ul style="list-style-type: none">能釐清所遇到的問題能清晰指出所選情景部分存在的問題	<ul style="list-style-type: none">能釐清所遇到的問題能清晰指出所選情景多於一個存在的問題	<ul style="list-style-type: none">能釐清所遇到的問題能清晰指出所選情景一個存在的問題

情境： (同組同學答案必須相同)

1. 所選的情境中主角所遇到的問題是甚麼？(個人作答)

同學可以就不同情景，比較不同解決方法的優劣。然後，選擇一個情景，並設計一個合適、可行的智能家居產品。

實踐經驗分享 3： 活用Google Classroom 促進自我評價及修訂

技巧：提供充分的自學資源/鷹架

📖 (專題匯報遞交) - CH1 單元E 智能家居

每組需要指派一名組員在此遞交以下項目，以便教師評分：

- (1) 一段約1分鐘的匯報影片(詳細指引及要求可閱讀附件);
- (2) 「輸入裝置microbit A」的程式及「輸出裝置microbit B」的程式;
- (3 - 額外加分項目) 拍照紀錄一份完整的專題報告。

中一級 創意科技科

專題任務 - 智能家居的最終匯報指引

一、匯報要求

1. 影片長度：約 1 分鐘
2. 匯報內容：設計意念及作品操作展示
3. 小組成員需共同參與

二、匯報影片準備步驟

1. 撰寫匯報腳本

可參考提供的「中一專題匯報講稿」的模板，包含：

實踐經驗分享 3： 活用Google Classroom 促進自我評價及修訂

問題分析 及想像

中一級智能家居專題匯報講稿框架

大家好！我們是____班的____和____。

我們的專題作品是_____。

這是用作解決情景____主角的問題，他因為_____，而感
到_____，希望我們的作品能為他解決這問題。這件成品
是由兩個 micro:bit 組成，並包含一些其他外置硬件，例如：
超音波感應器 / 直流馬達 / 伺服馬達 / LED燈帶/_____

中一級智能家居專題匯報講稿框架

它的運作原理 (處理過程)是_____

現在就讓我為大家示範一下我的作品。

學生成果(2)

學生自行與教師及助教預約時間，
在課後時間來STEAM ROOM
繼續完成專題

教師反思(1)

有甚麼成功經驗/要點值得推廣?

- 活用生成式 A I 來設計圖像化及生活化的教材，以及評分準則
 - 「漫畫分析」有利於吸引文字閱讀能力較弱的學生進行問題分析
- 採用大量引導性問題來推動學生思考
 - 分析解決問題
 - What—WHY—HOW
 - 自主學習
 - 為甚麼選擇這個情景？
 - 為甚麼選擇這個解決方案？
 - 可行嗎？時間上足夠嗎？硬件足夠嗎？
- 提供清晰及明確的評分準則
- 利用合適的電子習平台來紀錄及分享學生的專題期間的學習進程
- 信念：「後進生也能逐步發展解難及自主學習的能力」

教師反思(2)

在下一次執行時，有甚麼地方需要改善或留意？

- **人力資源**：專題研習會耗用大量課堂及備課時間，並需要有一定人力資源，並必須預習資源支援學習在課外完成專題任務
- **Plan B**：對於弱生而言，由「0到1」是十分困難，教師隨時要提供一個「逃生門」，即是每個任務都有一個半成品讓部分同學可以動力繼續完成
- **完成時間**：盡量需要在一個學期內完成整個專題任務
- **教學套件**：充足的專題套件需要在專題開始前準備好，如果能夠讓學生借用回家效果更好。
- **自主學習資源**：在前置的科技知識（micro:bit）課堂可以將部分專題會用到的硬件程式，提前教授，並製作一些學習資源（影片/程式/圖像）讓學生進行專題期間可以複習。

THANK
YOU!

Self-directed learning in STEAM learning design.

St. Margaret's Co-educational English Secondary and Primary School

Mr. Hui Yik On, STEAM Coordinator

Chan Sing Hin, Student Representative

Wong Cheuk Nam Marcus, Student Representative

學校簡介

- 直資一條龍英文中、小學
- 設有校本小一至中三STEAM常規課堂
- 重點關注事項(2023 - 2028)
 - Nurturing Active Learners: Prioritizing Ownership, Reflection, and Adaptability in Education
 - Strengthening Positive Education

計劃背景

- 由優質教育基金資助，
- 並由香港大學教育學院教育應用資訊科技發展研究中心(CITE)主辦。
- 建立聯校網絡，以促進可持續、可擴展的教學及評估創新。
- 重點概念/技能：
- 自主學習(Self-directed learning)
- 工程設計過程(Engineering design process)
- 數碼素養(Digital Literacy)

• <https://instem.cite.hku.hk/stem-education/>

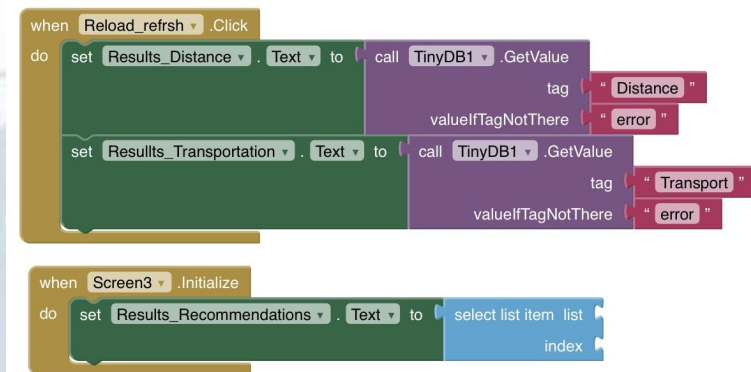

教學團隊

2023 – 2024	2024 - 2025

Student Award Scheme	Nomination of potential groups

學生在學習過程中的角色

-
- = CC 1 : Goal-setting: By empathy, understanding the difficulties faced by different groups of people, and then designing a product to meet their needs.
 - = CC 2 : Self-planning: By studying the works of predecessors, analysing their strengths and weakness, and then improving upon them.
 - = CC 3 : Self-planning: By writing a project proposal, providing a detailed list of skills and materials needed to produce the product.
 - = CC 4 : Self-monitoring: Constructing the digital product or real-product depending on the chosen topics according to their planned schedule.
 - = CC 5 : Self-evaluation: Testing the performance of the product and getting feedback from the different users and stakeholders
 - = CC 6 : Revision: Further enhancing the products based on the collected feedback.

- 設計師 Designer
- 程式設計員 Programmer
- 測試人員 Tester
- 實踐工程設計過程

Goal Setting

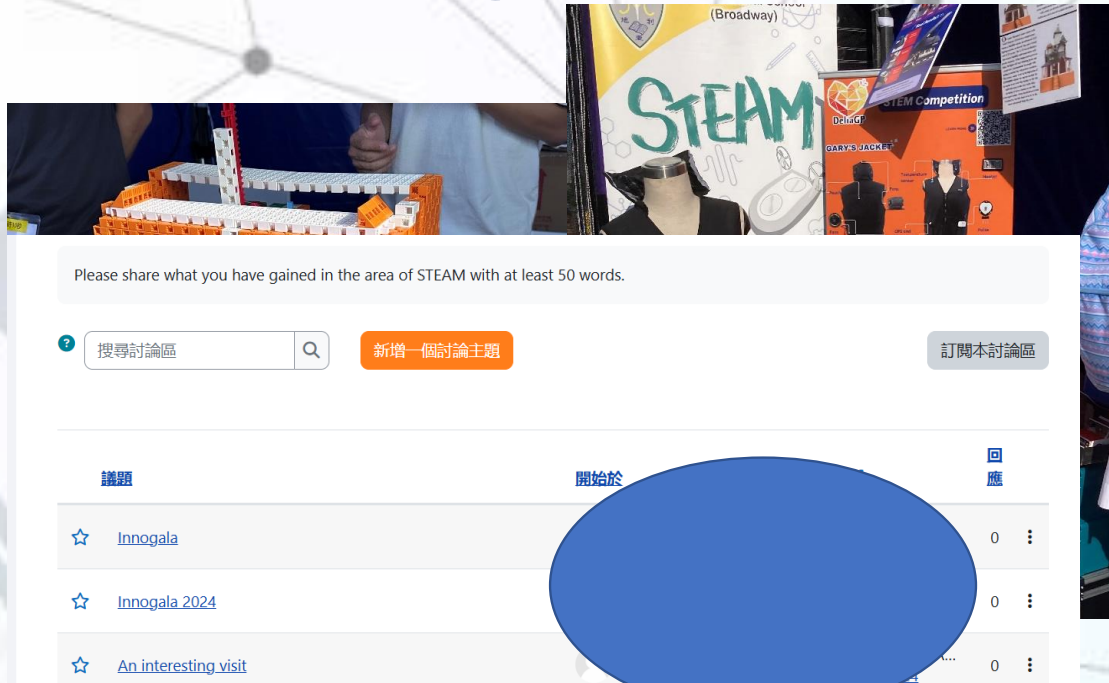

I would like to make a product to address a problem faced by a certain group of people. Could you name three common problems nowadays?

Assistant Poe

Here are three common problems faced by various groups of people today:

1. **Mental Health Issues:** Many individuals experience stress, anxiety, and depression, often exacerbated by social media, work pressures, and global events.
2. **Access to Quality Education:** Educational disparities exist, with many students lacking access to resources, technology, and support, particularly in underserved communities.
3. **Sustainability and Environmental Concerns:** People are increasingly concerned about climate change, pollution, and the depletion of natural resources, leading to a demand for eco-friendly products and practices.

Goal Setting

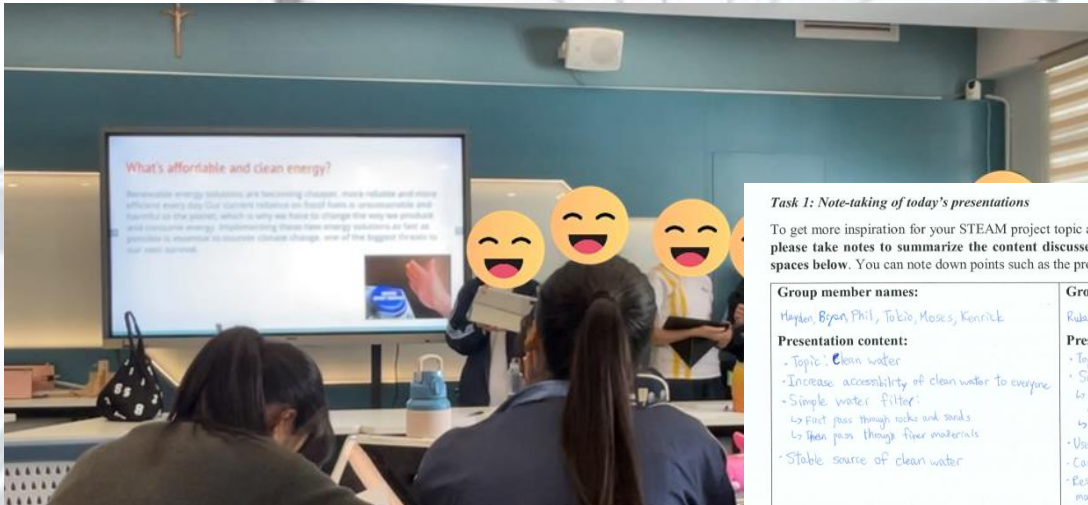

Task 1: Familiarizing yourself with the UN's 17 SDGs

Listed below are examples of projects related to the 17 SDGs. Please **match them to one corresponding SDG** based on the names of the projects and their descriptions.

Project	Corresponding SDG
Mental Health Awareness: Campaigns to promote mental health resources and reduce stigma.	Good Health and Well-being
Rainwater Harvesting Systems: Designing systems to collect rainwater for school gardens.	Clean Water and Sanitation
Solar Panel Projects: Installing solar panels to power parts of the school.	Affordable and Clean Energy
Community Resource Mapping: Create a detailed map of local resources available for low-income families, including food banks, shelters, and job training programs. Students can conduct interviews and surveys to gather information.	No Poverty
Sustainable Product Design: Students can design a prototype for a sustainable product, such as eco-friendly packaging or a reusable item. This project combines engineering principles with environmental science and artistic design.	Responsible Consumption and Production
Hydroponic System Design: Students can design and build a small hydroponic system to grow vegetables indoors, so that everyone is able to plant their own vegetables.	Zero Hunger

I think the Innogala was very useful because I could learn about STEAM from every booth there was. My favourite product I saw the Innogala is the claw machine made by Winstars. The reason why it is my favorite product is because it is one of my childhood toys, reminding me of my childhood. I hope I can go to the Innogala again someday.

Goal Setting

Task 1: Note-taking of today's presentations

To get more inspiration for your STEAM project topic and for the succeeding task in this worksheet, please take notes to summarize the content discussed within each group's presentation in the spaces below. You can note down points such as the project's goals, implementation, impact, etc.

<p>Group member names: Hapton, Bryan, Phil, Tobie, Moses, Kenrick</p> <p>Presentation content:</p> <ul style="list-style-type: none"> • Topic: Clean water • Increase accessibility of clean water to everyone • Simple water filter: <ul style="list-style-type: none"> ↳ First pass through rocks and sands ↳ Then pass through finer materials • Stable source of clean water 	<p>Group member names: Ruba, Marcus, Jay, Elyen, Mayes, Andrice (Karen)</p> <p>Presentation content:</p> <ul style="list-style-type: none"> • Topic: Life below water • Smart Buoys (Passive Acoustic Monitoring Buoy) <ul style="list-style-type: none"> ↳ Lots of sensors to transmit data to know condition of water ↳ Connected to Internet • Used to track animals like whales and dolphins • Can study animals without disturbing them • Respond quicker/do further analysis/see data to make products
<p>Group member names: Glory, Hannah, JC, Jasmine Wong, Isabelle, Tiffany</p> <p>Presentation content:</p> <ul style="list-style-type: none"> • Topic: Reduced inequalities • Modern Wheelchair • Help disabled ppl → let them have the ability to go out by themselves • Functions: <ul style="list-style-type: none"> ↳ Base → Google Maps as system to search routes ↳ Ozobot to help detect situations on roads ↳ Self-driven (AI voice & voice recognition) • Problems: <ul style="list-style-type: none"> ↳ Lines required for Ozobot ↳ Expensive ↳ How to stop at obstacles/traffic lights? 	<p>Group member names:</p> <p>Presentation content:</p>

Task 2: Presentation Reflection

After listening to the presentations and summarizing them in Task 1, please choose your favorite project that was presented by one of the groups and introduce it below in around 100 to 200 words. You may discuss the following points:

- Why this project is your favorite (e.g. it relates to a topic you are interested in, it inspires you, etc.)
- Project Overview (e.g. goals, target audience, etc.)
- Implementation (e.g. technology and methods used, key organizations/individuals, etc.)
- Impact and Results (e.g. outcomes, successes, challenges, etc.)

My favorite project was the smart buoy. The smart buoy, also known as the Passive Acoustic Monitoring Buoy and addresses the Sustainable Development Goal "Life Below Water". Sensing water environments of animals and sending data to research centres. It uses lots of different types of sensors to track different information of habitats of sea animals like dolphins and whales and to instantly transmit it back to research stations via the Internet. It is revolutionary as it can get large amounts of data without disturbing the wildlife, and it can send data much quicker than waiting for a researcher to travel back to stations which can allow researchers to respond to any possible crises or to do further analysis quicker.

Self-planning

- 撰寫計劃書
- 提供定期回饋，
如已批改的計劃書
(附有評分準則)

Students should be given the mark range in 'high', 'average', 'low' or 'NA' if their performance meet the most descriptions in that category.

Assessment Item	Full Mark	High	Average	Low	NA
Goal Setting	10	10 / 9 / 8 Able to choose 1-3 SDG(s), STEAM topic, identity the problem clearly , explain how does it relate to our daily life in detail and set an accurate goal .	7 / 6 / 5 / 4 Able to choose 1-3 SDG(s), STEAM topic, identity the problem and goal. However, do not have a comprehensive understanding of them.	3 / 2 / 1 Not able to point out the problem they want to address and set a suitable goal.	0 Not attempted / No focus.
Self-planning	10	10 / 9 / 8 Able to provide a detailed planning , including the following items: 1. adequate resources 2. skills and knowledge needed by self-studied 3. Suitable target users 4. Material list. 5. Timeline	7 / 6 / 5 / 4 Able to provide a simple planning , including the following items, but the description of each of the items are not enough : 1. adequate resources 2. skills and knowledge needed by self-studied 3. Suitable target users 4. Material list. 5. Timeline	3 / 2 / 1 Only able to provide a rough planning , including some of the following items: 1. adequate resources 2. skills and knowledge needed by self-studied 3. Suitable target users 4. Material list. 5. Timeline	0 Not able to provide any planning.

Self-planning

Presentation	10	10 / 9 / 8	7 / 6 / 5 / 4	3 / 2 / 1	0
		Have a well-organized structure, including title, name of team members, sections, subsections etc, clearly explain the significance of this project, provide argumentation for its significance with solid and reliable evidence.	Have a simple structure, simply explain the significance of this project and provide related information as evidence.	Have an incomplete structure, hard for readers to understand and follow.	Not understandable.
Subject Knowledge	10	10 / 9 / 8	7 / 6 / 5 / 4	3 / 2 / 1	0
		Able to highlight explicitly what they learnt in Mathematics, Science, Computer Literacy or other subjects in this project at a large extent.	Able to apply what they learnt in Mathematics, Science, Computer Literacy or other subjects in this project at a satisfactory extent.	Able to apply what they learnt in Mathematics, Science, Computer Literacy or other subjects in this project slightly.	Not able to show what subject knowledge they apply in this project.
Reference	10	10 / 9 / 8	7 / 6 / 5 / 4	3 / 2 / 1	0
		Read and reference a lot of reliable and relevant resources , including e-resources, books, dissertations etc. Have a well-organized reference list with APA format.	Read and reference some reliable and relevant resources , including e-resources, books, dissertations etc. Have a simple reference list.	Read and reference very few reliable and relevant resources. Do not have reference list.	Not attempted

STEAM Proposal - Self proposed project

Electromagnetic Generating Floor Tiles

1. Introduction

- Introduction
- Which SDGs are we focusing on
- Which topic we chose

2. Required Knowledge Basic Principle

- Electromagnetism

3. Significance of the Project

4. Skills/Knowledge Needed

5. Target User

6. Timeline & Work Distribution

7. Material List

8. Research Review

9. Reference (APA Format)

1) Introduction

a) Introduction

Electricity is critical and increasingly demanded nowadays. Energy crisis has also emerged as one of the biggest global challenges, as non renewable energy like fossil fuels and nuclear energy will run out eventually. Finding a replacement by using alternative sources of energy will be crucial for human long term development.

Electromagnetic floor tiles generate energy depending on the walking of humans.

b) Which SDGs are we focusing on

We are focusing on the SDG 7- Affordable and Clean Energy

SDG 11- Sustainable Cities and Communities

Ensuring access to affordable, reliable, modern and sustainable energy is a long term goal. Electromagnetic generating floor tiles contribute to the provision of clean energy by harnessing renewable sources which reduce the dependence on fossil fuels.

In addition, this innovative design enhances the energy efficiency of urban infrastructure. For example, the energy generated could be used to power lighting in the cities

c) Topic we chose

Self proposed topic and laser cutting for wood

Self-planning

2. Required knowledge and basic principles

What is electromagnetism?

In physics, electromagnetism is a type of interaction between particles by an electromagnetic field. An electromagnetic force is one of the four fundamental forces (Electromagnetism, the strong nuclear force, weak nuclear force, and gravity).

The electromagnetic force is a combination of electrostatics and magnetism. It acts between particles with opposite charges to attract each other and repulse those with the same charge. We can define these two forces in terms of the electromagnetic field.

6) Timeline & Work Distribution

September - November

- Proposal making

December - January

- Presentation

January - February

- Buy all materials needed
- Confirm our project with the client

March - April

- Work on the product
- Make amendments

May

- Presentation of our product

Work Distribution

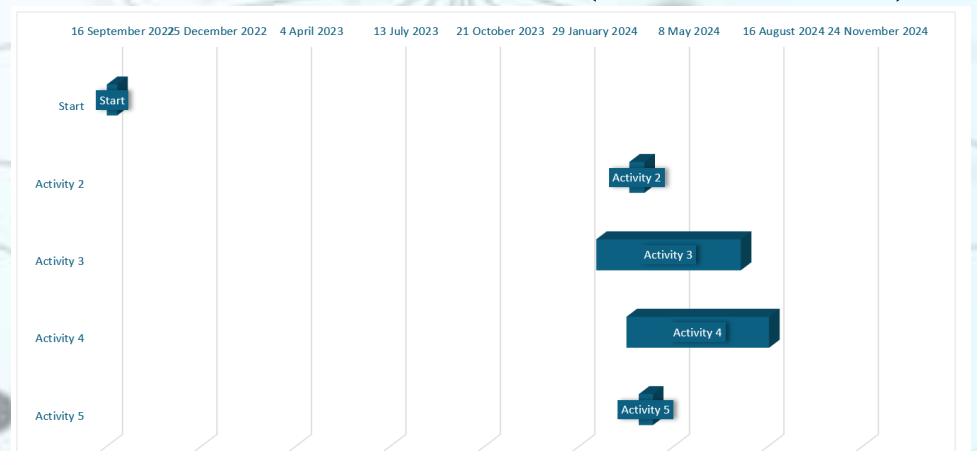

- Megrez: Proposal making (Research, Analysis), designing
- Eyton: Proposal making (Introduction), product creation
- Ruka: Proposal making (Target users), product creation
- Marcus: Proposal making
- Jay: skills required
- Candice: drafting our design

Schedule

Process Timeline						
September						
Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
					1	2
3	4 Discuss with teammates what project is to be done	5	6	7	8	9
		Research the technical aspects of the project, how difficult the process is				
10	11 Discuss what was gathered, if we are still up to the project	12	13	14	15	16
		Research in detail what prospects are needed				
17	18	19	20	21	22	23
	Research why it's useful in daily life with reference and facts					
24	25 Gather on a doc	26	27	28	29	30
	Ask for opinion and advice	Fix and change the doc				

Process Timeline						
October						
Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
1	2	3	4	5	6	7
	Re-evaluating our target audience		Researching how our project will benefit our new target audience, alongside the disadvantages of using it			
8	9	10	11	12	13	14
	Drafting our initial design (to be adjusted in further months)					
15	16	17	18	19	20	21
	Further research on each and every material (e.g it's purpose, how to use it) to complete the project					
22	23	24	25	26	27	28
29	30	31				

Self-evaluation

- 教導學生利用AI生成工具撰寫成功指引

Watch the following video and answer these 2 MCQs.

What is Prompt Engineering primarily concerned with?

- ☐ a. Creating visual designs for websites
- ☐ b. Writing clear questions to help AI give useful and relevant answers
- ☐ c. Programming computer algorithms for data analysis
- ☐ d. Developing hardware solutions for robotics

Which of the following is an example of a good prompt for generating success criteria?

- ☐ a. What do you think about my project?
- ☐ b. What are three measurable outcomes to determine the success of my solar-powered model car?
- ☐ c. List some things that might matter for success.
- ☐ d. Provide some ideas about being successful.

steam Roblox poverty game project
由S3B 12 FONG CHUN YAT發表於2025年 04月 29日(週二) 16:00

By poe:

1. Educational Outcomes

- **Knowledge Assessment:** Pre- and post-game quizzes to measure changes in understanding of poverty-related concepts (e.g., statistics, causes, and effects).
- **Skill Development:** Ability to identify and articulate solutions to poverty-related challenges (measured through in-game tasks).

2. Engagement Metrics

- **Playtime:** Average duration of gameplay per session.
- **User Retention:** Percentage of players returning to the game after the first session (tracked over a week/month).
- **Level Completion Rates:** Percentage of players who complete each level or task in the game.

3. User Feedback

- **Surveys:** Collect player feedback on enjoyment, learning experience, and perceived relevance of the game.
- **Rating System:** Implement a star rating system that allows players to rate their experience.

4. Community Interaction

- **Forum Participation:** Number of players engaging in discussions about the game's themes in forums or social media.
- **Collaborative Projects:** Count of in-game collaborations or projects initiated by players.

5. Behavioral Changes

- **Actionable Insights:** Survey players on their real-world behaviors and attitudes toward poverty before and after gameplay (e.g., increased awareness or willingness to engage in community service).

6. Accessibility Metrics

- **Diversity of Players:** Percentage of players from different backgrounds and demographics.
- **Technical Accessibility:** Number of players able to access and play the game without technical issues.

Criteria for success

Example:

Criteria	Excellent	Good	Fair	Not Applicable
1. Energy Saving				
Deducing energy consumption	Saving 20% or more	Saving 10 – 19%	Saving 1 – 9%	Saving 0% or even consuming more than that of the original product
2. Cost Saving				
Reducing cost	Reducing 25% or more	Reducing 15 – 24%	Reducing 5 – 14%	Reducing 0% or even more expansive that that of the original product
3. Environmental-friendly				
Reducing carbon emission	Reducing 50% or more	Reducing 24 – 49% or more	Reducing 10 – 24% or more	Reducing 0% or even producing more than that of the original product
Using recycled materials	Using 100% recycled materials	Using 75% – 99% recycled materials	Using 50% – 75% recycled materials	Not using recycled materials
4. User-friendly (from questionnaire)				
Usability test score	Average score is greater than 9 marks	Average score is greater than 7 – 8 marks	Average score is greater than 5 – 6 marks	Average score is lower than 5 marks
5. Automation				
Degree of automation	Performing tasks automatically without human intervention	Requiring minimal users input to perform certain tasks, but still relying on some manual operations	Having limited automation capabilities and heavily replying on manual operation	No automation, replying on manual operation completely

Self-evaluation & Peer evaluation

9.1. Reflection

Nowadays, urban residents prefer to reduce space as plenty of furniture or tools will be crammed in such a small area. It is, with no doubt, very troublesome that when things cluster together, a messy environment will be formed and the user might feel frustrated for not finding the required tool. Being cognizant of this ongoing circumstance, our objective of this project is to save space in the kitchen in order to make it cleaner, and to improve our personal hygiene. In this 15 cm model, several functions such as storing utensils and sanitising can be carried in an organised way. Overall, our project did manage to save space, making the environment more hygienic.

While modelling the whale on SketchUp, our skills of 3D modelling have greatly improved. From designing and creating shapes, or how to mirror and flip objects. Instead of blindly following instructions, this is a creative and original product.

In our opinion, the most important thing we have learnt in this project is perseverance, which is one of the core values promoted by school.

At the beginning of the project, we barely had any clue of what functions the whale could require as its size is relatively small. But since we persisted in thinking of relevant tools that kitchens commonly have, we came up with an idea of a multi-functional whale.

Perseverance demonstrated the most during the process of modelling. Modelling the whale is highly demanding because we want to restore the characteristics of the whale's curved body as much as possible. Although we could not model a curved surface due to 3D modelling limitations, we still put in a lot of effort and time to make the whale's body as round as possible.

The second core value we demonstrated is self-management. We need to complete assignments given daily and do revisions for upcoming quizzes or tests. As a result, we need to manage and distribute time accordingly, some for homework, some for tests, and some for this project.

Self-evaluation

香港大學教育應用資訊科技發展研究中心
HKU CITE 學生獎勵計劃 2023-2024
STEAM 自主學習之星 反

A1:

After witnessing many bridges collapsing due to resonance, even a bridge, it was observed that the problem of resonance is still very much which inspired me to try and replicate a bridge undergoing simulating the situation, along with building miniature dampers problem of bridges collapsing because of bridge resonance. By the problem of bridge resonance can be brought to light and provide solutions to get rid of this problem in bridge design.

A2:

Many different aspects of building were implemented into the project:

- Background research, where I found different historical bridges and their resonance
- Collection of information relating to the use of different alternate prevention measures like fluid and frictional damping due to design of bridges
- Basic design of said bridge, researching how resonance and how to adapt dampers as a simplification
- Construction of bridge model by using different techniques to overcome obstacles, such as research towards how different materials affect the bridge from failing
- Improvement of model design by replacing certain parts of the bridge from failing
- Undergoing experiments to see how different dampers work and what type of prevention measure works the best

A3:

Apart from learning various aspects of STEAM knowledge and how to apply them, various types of core values had also been demonstrated in the construction of the bridge, including:

- **Commitment**, where leisure time was invested into data research and compilation, along with construction of said bridge in order to continuously improve in design and construction. I learned that in order to achieve a project like this, tremendous time and effort must be put in.
- **Leadership**, where fellow peers were instrumental in their completion of said project. I learned to lead a group and instruct them in various different aspects of the project, so that clashes do not occur.
- **Optimism**, where I learned to stay positive even when encountering certain limitations and problems. Even when the design of the material did not match how nails were to be installed, I stayed optimistic and searched for alternative building options that fit the workings of the bridge. Eventually, the bridge was completed.
- **Perseverance**, where I learned to continuously work on the project and to not give up, even when facing obstacles, as there will always be and aspect to be improved on.

In terms of physics and mathematics, I came into contact with upper-secondary knowledge, learning how to simulate similar situations in the future.

I also learned digital literacy, as reports of the calibre of university were required. I learned to use different websites like google scholar to find references and citations, and to quote citations I used in reports.

Revision

• 撰寫項目日誌傑出示例： Prototype

7.1. First Prototype

Our first prototype was just a mini model, just used to check whether the overall design is acceptable.

As shown from the diagram, the appearance of the whale can roughly be seen. Even with supporters, the tail and fins broke during the printing progress as it was too thin, consequently being fragile.

The base for the whale was also unable to be printed out as errors occurred prior printing. We can conclude that the first prototype was a bit disappointing.

In order to improve, we will need to thicken the tail so it will not fall off from the whale and a sensor can be installed into it; and to reconstruct the base so it can be printed out.

1st prototype (mini model)

7.2. Second Prototype

After some modifications, the result is better.

From the diagram, we can see that the shape of the whale is more evident — the head, fins and tail displayed obviousness. Also, since the tail of the whale has thickened, it did not break during the printing process.

The base to support the whale can also be printed out after reconstruction. The next thing to do is to construct hollow parts in the whale, as shown in design diagrams, to put UV light, hand sanitizer tube and hand sanitizer gel into the whale.

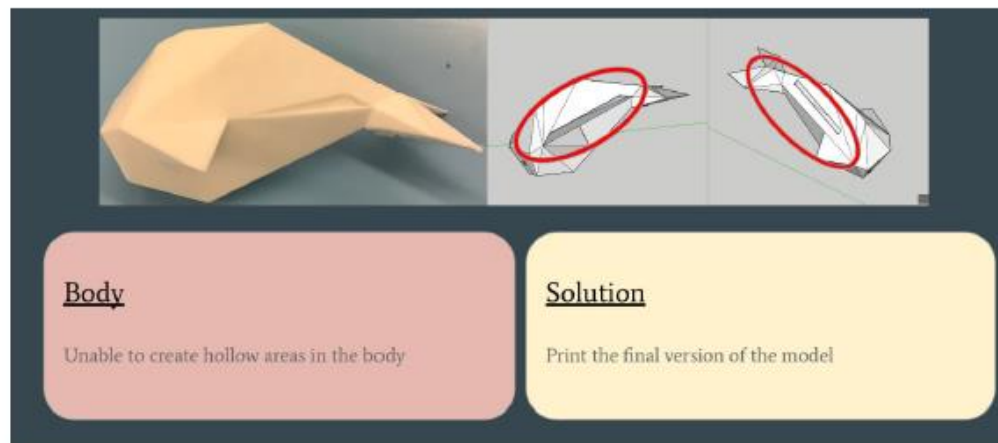

Revision

- 撰寫項目日誌傑出示例：
Prototype

7.3. Finalised Product

This is our finalised product, showing similarity to the second prototype.

We acknowledged the fact that installing supporters inside a body is a difficult task, thus printing models with hollows is very strenuous from teachers and “SketchUp”, due to the reality that 3D platforms frequently remind us that they are unable to print models that are not in solid state. Eventually, we could only ignore that error and still print the product out.

There is only a small gap, so the components cannot be installed.

總結及心得分享

- 善用科技支援：BYOD、Google Classroom、iLap及LDS。
- 提供各項評估的樣本示例及評分指引。例如計劃書、成功準則等。
- 需要足夠的人力資源、軟件及硬件。
- 邀請不同科目的老師提供技術上支援。
- **Feedback & Feed-forward:** 定期向管理層匯報，讓管理層知道前線老師的需要，並將良好設計推展到其他科目及級別。
- 尋求不同持份者支持，如校方及**家長**。
- 鼓勵科任老師及學生成為不同類型分享會的講者。

以全方位自主學習推展校本STEAM課程計劃 (In-STEAM)網站

The background features a light blue and white gradient. Overlaid on this are several faint, stylized elements: a network of dark grey dots connected by thin lines, and three interlocking gears of different sizes. One gear is on the left, another is at the top right, and a third is at the bottom left. The text is centered over the network diagram.
